

SCOPE OF WORK (SOW)

Enout Event Management Application

Project: Enout Event Management App

Repository: <https://github.com/Tanmay-enout/enout-event-management-APP->

Document Version: 1.0

Date: October 2024

1. COMPLETED DEVELOPMENT WORK

1.1 Admin Dashboard (Next.js/React)

Status:  FULLY IMPLEMENTED

Core Features:

- **Event Management System**
 - Create, read, update, delete events
 - Event status calculation (pending/in_progress/complete)
 - Event search and filtering
 - Event selection and navigation

- Fallback events for development
- **Guest Management System**
 - Guest list with pagination (100 items per page)
 - Guest creation, editing, and deletion
 - Bulk actions (send invites, resend invites, export CSV)
 - Guest filtering and search
 - Import functionality for CSV files
 - Guest status tracking (invited, registered, accepted)
- **Message Broadcasting System**
 - 3-tab layout: Sent, Drafts, Send Message
 - Message composer with rich text editing
 - Draft creation and editing
 - Message scheduling functionality
 - Audience targeting (all, invited, accepted)
- **Schedule Management**
 - Calendar view with week/month navigation
 - Schedule item creation, editing, deletion
 - Time slot management
 - Event timeline display
 - Optimized performance with memoization
- **Room Management**
 - Room assignment interface
 - Guest-to-room mapping
 - Room status tracking
 - Export functionality

UI/UX Components:

- Responsive dashboard layout
- Sidebar navigation with event list
- Top tabs for event sections
- Modal dialogs for forms
- Toast notifications
- Loading states and error handling
- Mobile-responsive design

State Management:

- Zustand for global state
- React Query for server state
- Local storage for temporary data
- Optimistic updates

1.2 Backend API (NestJS)

Status:  FULLY IMPLEMENTED

Core Modules:

- **Events Module**
 - CRUD operations for events
 - Event filtering and pagination
 - Event status management
- **Authentication Module**
 - OTP-based authentication
 - JWT token management
 - Admin and attendee auth flows
 - Passwordless login system

- **Invites/Guests Module**
 - Guest invitation system
 - Bulk invite operations
 - Guest status tracking
 - CSV import/export
- **Schedule Module**
 - Itinerary item management
 - Schedule CRUD operations
 - Time-based filtering
- **Messages Module**
 - Message broadcasting
 - Draft management
 - Message scheduling
 - Audience targeting
- **Attendees Module**
 - Attendee profile management
 - Check-in functionality
 - Status tracking

Infrastructure:

- **Database Integration**
 - Prisma ORM with PostgreSQL
 - Database migrations
 - Seed data for development
 - Connection pooling
- **Security Features**

- CORS configuration
- Rate limiting (configurable)
- Input validation with DTOs
- Error handling middleware
- Helmet security headers
- **API Documentation**
 - Swagger/OpenAPI integration
 - Comprehensive endpoint documentation
 - Request/response schemas

1.3 Mobile Application (React Native/Expo)

Status:  PARTIALLY IMPLEMENTED

Implemented Features:

- **Authentication Flow**
 - Email OTP verification
 - Phone number verification
 - Token-based authentication
 - Mock API integration
- **Task Management**
 - Task completion tracking
 - ID card upload
 - Registration form
 - Phone verification
- **Navigation Structure**
 - Expo Router implementation
 - Public and authenticated routes

- Deep linking support

UI Components:

- Responsive mobile layouts
- Form components
- Task completion indicators
- Development data banner

1.4 Database Schema

Status:  FULLY IMPLEMENTED

Core Models:

- **User Management**
 - Users with role-based access
 - Admin and HR roles
 - Authentication tracking
- **Event Management**
 - Events with full metadata
 - Timezone support
 - Status tracking
 - Location management
- **Guest Management**
 - Invites with status tracking
 - Attendee profiles
 - Bulk operations support
- **Schedule Management**
 - Itinerary items
 - Time-based scheduling

- Location tracking
 - **Room Management**
 - Room assignments
 - Guest-to-room mapping
 - Room status tracking
 - **Message System**
 - Message broadcasting
 - Draft management
 - Audience targeting
-

2. PENDING/INCOMPLETE WORK

2.1 Mobile Application

Status:  REQUIRES COMPLETION

Missing Features:

- **Real API Integration**
 - Currently using mock APIs only
 - Network calls not implemented
 - Storage stubs need real implementation
- **Core Event Features**
 - Event browsing and details
 - Schedule viewing
 - Message inbox
 - Profile management
 - Check-in functionality
- **Production Features**

- Push notifications
- Offline support
- Real-time updates
- Image upload functionality

2.2 Backend API Enhancements

Status:  PARTIALLY COMPLETE

Missing Implementations:

- **Room API Endpoints**
 - Room CRUD operations
 - Room assignment logic
 - Room status management
- **Message Broadcasting**
 - Email integration (currently disabled)
 - SMS notifications
 - Push notification service
- **File Upload System**
 - Image upload for events
 - Document upload for guests
 - File storage integration

2.3 Production Readiness

Status:  NOT STARTED

Missing Infrastructure:

- **Environment Configuration**
 - Production environment setup

- Environment-specific configurations
 - Secrets management
 - **Deployment Pipeline**
 - CI/CD configuration
 - Docker containerization
 - Cloud deployment setup
 - **Monitoring & Logging**
 - Application monitoring
 - Error tracking
 - Performance monitoring
-

3. KNOWN ISSUES & BUGS

3.1 Critical Issues

Priority:  HIGH

1. Rate Limiting Disabled

- `RATE_LIMIT_ENABLED="false"` in development
- Needs proper configuration for production
- **Impact:** Security vulnerability

2. Email Service Disabled

- `EMAIL_ENABLED="false"` in configuration
- Message broadcasting won't work
- **Impact:** Core functionality broken

3. Mock Data Dependencies

- Mobile app relies entirely on mocks
- Admin dashboard has fallback events

- **Impact:** No real data flow

3.2 Performance Issues

Priority: 🟡 MEDIUM

1. API Rate Limiting

- 429 errors during development
- Retry logic implemented but needs tuning
- **Impact:** Poor user experience

2. Database Queries

- Some queries lack proper indexing
- N+1 query problems in some endpoints
- **Impact:** Slow response times

3. Frontend Performance

- Large bundle sizes
- Unoptimized images
- **Impact:** Slow loading times

3.3 UI/UX Issues

Priority: 🟡 MEDIUM

1. Error Handling

- Inconsistent error messages
- Some errors not user-friendly
- **Impact:** Poor user experience

2. Loading States

- Some components lack loading indicators
- Skeleton screens not implemented
- **Impact:** Perceived performance issues

3. Mobile Responsiveness

- Some admin components not mobile-optimized
 - Touch interactions need improvement
 - **Impact:** Mobile usability issues
-

4. TECHNICAL DEBT & IMPROVEMENTS

4.1 Code Quality

Priority: 🟡 MEDIUM

1. TypeScript Improvements

- Some `any` types need proper typing
- Missing interface definitions
- **Action:** Add comprehensive type definitions

2. Error Handling

- Inconsistent error handling patterns
- Missing error boundaries
- **Action:** Implement global error handling

3. Code Organization

- Some components are too large
- Business logic mixed with UI
- **Action:** Refactor into smaller, focused components

4.2 Architecture Improvements

Priority: 🟡 MEDIUM

1. API Client

- Retry logic needs refinement
- Timeout handling could be improved

- **Action:** Implement robust API client

2. State Management

- Some state updates could be optimized
- Cache invalidation needs improvement
- **Action:** Optimize state management patterns

3. Database Schema

- Some relationships could be optimized
- Missing indexes on frequently queried fields
- **Action:** Add database optimizations

4.3 Security Improvements

Priority:  HIGH

1. Authentication

- JWT secret is hardcoded
- Token expiration handling needs improvement
- **Action:** Implement proper secret management

2. Input Validation

- Some endpoints lack proper validation
- SQL injection prevention needs review
- **Action:** Strengthen input validation

3. CORS Configuration

- Currently allows all origins in development
- **Action:** Configure proper CORS for production

5. NEXT STEPS & RECOMMENDATIONS

5.1 Immediate Priorities

Priority: 🚨 CRITICAL

1. Enable Production Services

- Configure email service with real provider
- Enable rate limiting with proper limits
- Set up production database
- **Effort:** 2-3 days

2. Fix Critical Bugs

- Resolve 429 rate limiting errors
- Fix message broadcasting
- Implement proper error handling
- **Effort:** 3-4 days

3. Complete Mobile API Integration

- Replace mock APIs with real endpoints
- Implement proper storage
- Add network error handling
- **Effort:** 5-7 days

5.2 Short-term Goals

Priority: 🟡 HIGH

1. Production Deployment

- Set up CI/CD pipeline
- Configure production environment
- Implement monitoring
- **Effort:** 5-7 days

2. Performance Optimization

- Optimize database queries

- Implement caching
- Bundle size optimization
- **Effort:** 3-5 days

3. Testing Implementation

- Unit tests for critical functions
- Integration tests for APIs
- E2E tests for user flows
- **Effort:** 7-10 days

5.3 Medium-term Goals

Priority:  MEDIUM

1. Feature Enhancements

- Advanced reporting
- Analytics dashboard
- Bulk operations improvements
- **Effort:** 10-14 days

2. Mobile App Completion

- Real-time notifications
- Offline support
- Advanced features
- **Effort:** 14-21 days

3. Security Hardening

- Security audit
- Penetration testing
- Compliance review
- **Effort:** 7-10 days

5.4 Long-term Goals

Priority: 🟢 LOW

1. Scalability Improvements

- Microservices architecture
- Load balancing
- Database sharding
- **Effort:** 21-30 days

2. Advanced Features

- AI-powered recommendations
 - Advanced analytics
 - Third-party integrations
 - **Effort:** 30+ days
-

6. DEVELOPMENT ENVIRONMENT SETUP

6.1 Prerequisites

- Node.js 18+
- PostgreSQL 14+
- Redis 6+
- pnpm package manager

6.2 Quick Start Commands

```
# Install dependencies  
pnpm install
```

```
# Set up database  
cd apps/api  
pnpm prisma:generate
```

```
pnpm prisma:push
pnpm prisma:seed

# Start development servers
pnpm --filter @enout/api dev    # API on port 3006
pnpm --filter @enout/admin dev  # Admin on port 3000
pnpm --filter enout-mobile start # Mobile app
```

6.3 Environment Variables

- Copy `.env.example` files
 - Configure database URLs
 - Set up email service credentials
 - Configure JWT secrets
-

7. CONTACT & SUPPORT

Repository: <https://github.com/Tanmay-enout/enout-event-management-APP->

Documentation: See [README.md](#) for detailed setup instructions

Issues: Use GitHub Issues for bug reports and feature requests

Document prepared by: Development Team

Last updated: October 2024

Next review: Upon project handover
